Launch Plus – Time 4

Drones – A Year 7 to 9 Launch+ Initiative

Launch+ Workshops – Term 1

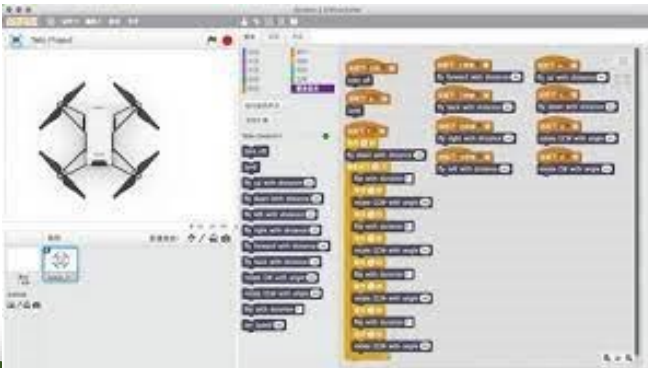

Drone Drop Challenge

The emergency call has received by the SES centre. A hiker exploring the bushland of Mt Cooth-tha is suffering an allergic reaction and urgently required medical attention. The entangled bushland prohibits vehicle access and on-foot is not timely. You and your team will need to employ your drone flying skills to retrieve and deliver a medical pack as close as possible to the hiker.

What you will do

Using a range of material we will construct a dispatch centre and a landscape for the rescue. Other obstacles will be provided to challenge your flight skills. You will also begin to learn flight sequences of taking off, landing with precision and linear movement. Once you have mastered the manual flight controls you will begin flight path training with different degrees of difficulty.

You will also learn how to pre-program the drone in order to comply with local aviation regulations and “no-fly zones”. The drone will need to be programmed to ensure a flight does not pass directly restricted areas such as airports and government military assets. Such areas will be identified on the course map and with props.

Details

Admission Price:
\$75 per student .

Time: 1:50 – 3:00pm

Date: **Every Monday for Term 1**

What You Need: Just your Smile

LIMITED POSITIONS – 14
